

Gfp-cnn1 fusion clone

Gfp was removed from the Egfp-C1 clone (Clontech) with Nhe(klenow), XbaI and inserted into pUASP at the NotI (klenow), XbaI sites. It contains polylinker sites from the C1 clone. *

PCR generated cnn1 - BamHI ends - was inserted into the BamHI (klenow) into the BglII site of pUASP/Egfc1.

*Please see common vector #1240 for the map of pUASP-Egfp-C1
